PROFESSIONAL SUMMARY

Sixteen years turning measurement into **a recommendation someone acts on**. Started in badminton equipment R&D at VICTOR — human subject testing and biomechanical validation since 2010 — and built a consumer-facing equipment assessment product there. Moved through adidas badminton product marketing across APAC and foot-health product development at A.S.O., and now heads LP Support's Motion Science Lab, running its force plate assessment service end to end: the same assessment-to-recommendation architecture, applied to clinical and athletic populations.

CORE COMPETENCIES

Force Plate Assessment	Biomechanics	Product Specification	Research Translation	B2B Commercialization
Cross-functional Delivery	APAC Markets	Experimental Design		

WORK EXPERIENCE

威亘企業有限公司 (LP Support) September 2018 - Present

Head of Motion Science Lab

Taipei, Taiwan

- Designed and standardized **force plate assessment protocols** across CMJ, SCMJ, SJ, DJ and lateral jump testing. The system computes **120+ biomechanical metrics**; about **12 are surfaced per report**, selected by who the subject is — a deliberate signal-over-volume decision
- Accumulated **10,000+ professional athlete assessment sessions** since the lab opened in 2019
- Built the assessment-to-report workflow end to end — sensor capture, quality control, interpretation logic, report generation — cutting per-assessment processing from **half a working day to 1 minute**
- Kept each report's claims inside what the measurement supports, separating athletic performance, fatigue monitoring, movement strategy and rehabilitation follow-up
- Built the B2B commercial model and pricing for the assessment service and negotiated a partnership to terms
- Directly managed a team of up to 5 (3 full-time, 2 part-time), including performance reviews

阿瘦實業股份有限公司 (A.S.O.) June 2017 - March 2018

Deputy Manager, R&D

Taipei, Taiwan

- Led foot-health product line development, integrating **plantar pressure measurement** and consumer insight into product specifications
- Cut the prototyping and requirements-alignment phase from about six months to four weeks**
- Coordinated factory, design and marketing functions to bring functional footwear to market

伯諾股份有限公司 July 2016 - December 2016

Merchandising Manager

Taiwan

- Merchandising management for an international sports brand in the Taiwan market: product line planning, assortment and positioning

點石創新 / Intowow (Taiwan Branch) February 2016 - May 2016

Product Manager

Taipei, Taiwan

- Product manager for an **advertising SDK** delivered as a technical integration into publisher apps including Apple Daily — spec definition and delivery alongside engineering

大器事業有限公司

December 2015 - February 2016

Manager, Sports Division

Taiwan

- Sports division management covering brand development, product line definition and positioning

adidas Hong Kong

September 2013 - October 2015

Badminton Product Marketing Manager

Hong Kong SAR

- Ran **badminton** category product marketing across the APAC region — a direct continuation of the badminton equipment R&D work at VICTOR
- Badminton product development; main presenter at Greater China product launch events
- APAC badminton category grew **18% year on year**; main drivers were a new Indonesian distributor channel and increased China order volume, with marketing as a supporting condition
- Secured the **HKD 8M+ annual budget** and owned its allocation across the category
- Led new product launches, KOL partnerships and retail activation programs

勝利體育事業股份有限公司 (VICTOR)

July 2010 - August 2013

Product R&D Engineer

Taipei, Taiwan

- Designed participant recruitment and led lab and human functional testing across rackets, strings and footwear; authored standardized test reports driving product improvement — **grip force transmission, vibration damping, dynamic stability**
- Standardized the play-test protocol into an SOP; authored **50+ biomechanical test reports**, supporting Korean national team equipment replacement and testing with Olympic-level badminton athletes
- Built a comparative biomechanics database covering **30+ competitor products** across three categories (YONEX, LI-NING and others) to inform product positioning and the R&D roadmap
- Defined pre-production functional specifications from test data — structural stiffness, cushioning material, durability — keeping design intent aligned with measured performance
- Led design and delivery of the "**5S Racket Expert System**", a consumer-facing decision support product combining individualized assessment logic, purchase recommendation and education
- **Introduced advanced material technology** through a production bottleneck

EDUCATION

MSc, Sports Science (Biomechanics) National Taiwan Normal University

2010

Taipei, Taiwan

Thesis: The Effects of Badminton Racket Stiffness and Balance Point on Swing Speed and Shuttlecock Speed Performance (不同羽球拍勁度與平衡點對於揮拍速度及球速表現之影響)

BSc, Physical Education National Tsing Hua University (formerly NHCUE)

2008

Hsinchu, Taiwan

SKILLS

Biomechanics & Assessment: Force plate protocol design, CMJ / SCMJ / SJ / DJ testing, rate of force development, eccentric deceleration, asymmetry index, landing mechanics, dynamic postural control, functional movement assessment

Product: Product specification, PRD authoring, NPI coordination, pricing, B2B service design, cross-functional delivery

Statistics & Experimental Design - Hands-on: Power analysis / sample size estimation, t-test, ANOVA, regression analysis, controlled test design, critical appraisal of published statistics

Data Tools - Hands-on: Google Sheets QUERY dashboards (primary) and Looker Studio, AI-assisted dynamic dashboard generation, exploratory analysis and output review in Python (pandas)

Data - Requirements & Acceptance: Data requirements definition and acceptance criteria, classification model use-case definition, report system specification; implementation by the engineering team

Languages: Chinese (native), English (professional working proficiency)
